The Ear, Nose, Throat (ENT) and related head and neck structure are highly integrated parts of the human body. Each is closely connected and very dependent on the other. For example, sinus disease and tumors of the upper throat can cause hearing loss; or a cancer of the lower throat or voice box can cause ear pain. In diagnosis and treatment of any ear, nose or throat disorder, looking at the whole picture must always be prime consideration.

Our highly qualified group of certified physicians and surgeons are dedicated to totally integrated diagnosis and treatment.

AUDIOLOGY

As we grow older, we are prone to hearing loss. Most hearing problems, no matter what age, can be corrected, either medically, surgically, or by the use of today's modern hearing aids. To evaluate your hearing disorder, our audiologists will obtain a detailed study of your condition in the form of an audiogram or hearing profile to determine the best treatment option for you.

AUDIOLOGY SERVICES

- Audiometric Evaluation
- Auditory Brainstem Response
- Otoacoustic Emissions
- Hearing Aid Selection, Fitting & Repair
- Cochlear Implant Evaluation & Mapping

All testing is performed with the newest technology and state of the art equipment. ***All types of digital hearing aids are available.***

RANGE OF CARE
